Mina Mehdizadeh

About me:

NAME: MINA MEHDIZADEH
Data of birth: 30/10/1993
Phone: (+98)9134929113
E-mail: minamehdizadeh97@gmail.com
Address: 39W 3th ST,Olampik
Sirjan,Kerman,Iran

software skills

Auto Cad 2D,3D		Sketchup	
Autodesk 3DS Max		Vray	
Adobe Suite		Team Work	
Photoshop		Archicad	
Indesign		Hand Sketch	
Illustrator		Lumion	
Microsoft Office(word,excel,powerpoint)			

Education

2017 _ Bachelor of Architecture Islamic Azad University of Kerman (Iran)

2020 _ Masters of Architecture Bahonar University of Kerman (Iran)

Workshop & Competition

2013 _ Islamic Architecture(workshop) Kerman House of Quality:

Mr Mohammad pour afghan & Mr Mohammd Shetafat Esfahani(partA) 8 hours training Seminar

2014 _ Islamic Architecture(workshop) Kerman University Jihad:

Mr Hoseen Pormosa(partB) 8 hours training Seminar

_ Khaje Khezr Quarter (Competition):

Dr.Khosrow Bozorgi & Dr. Mamak Nasiri Nasab (Team work)

_ Autodesk2D (Competition) Kerman University Jihad

_ Autodesk3D (Competition) Kerman University Jihad

HONORS AND AWARDS

2017 _ Receive the gold medal of the Keman Ramazan Cup volleyball tournament

2019 _ Get a hair color training certificate in hairdressing

Work Experience

_ From 2017 to 2020, I worked in the architectural design office as a plan designer and supervisor

_ Lady Effat Bemani

_ Phone:(+989133479364)

_ E-mail: Effat.bemani@gmail.com

Undergraduate dissertation summary

Carpet Museum: This design is made of hand-woven carpets from Kerman. The idea and design of this building is based on the taro fabric of Kerman. The idea and design of this building is based on the taro fabric of Kerman hand-woven carpets, which are more flexible than machine-made carpets.

In this design, there is a page that shows the flexibility mode. This page is taken from the same taro fabric.

The design is based on climatic and indigenous architecture and taking into account the weather conditions.

The required spaces for this building include: permanent gallery, temporary gallery, educational part, office part, etc.

Master Thesis Summary

In recent years, much attention has been paid to some of the neurobiological diseases of children, including Autism Spectrum Disorder. Autism is a disease of children, including Autism Spectrum Disorder. Autism is a disease that leads to Problems with speech, social skills, and repetitive and aimless behaviors.

The purpose of these studies and the design of this building for children with autism is that children with autism can control their emotional behaviors by being in the right environment and learning the right lessons and also communicate with their surroundings.

The design is based on climatic and indigenous architecture and taking into account the weather conditions.

Research interests

Man's relationship with the environment, Man and sustainable architecture, Urban planning, Man's relationship with the city's aging environment, Dirty energies, Man's relationship with the form of buildings and spaces, Collect and store energy, etc.

Background

Kerman carpet is one of the oldest and most amazing Iranian handicrafts that has countless fans all over the world. This beautiful rug is produced in various designs and colors, but the most commonly used design in this type of rug is the flower and plant design with a central thorn. The combination of red and blue colors is mostly used in Kerman carpets and this carpet has its own unique features. Kerman carpets are produced using environmentally friendly raw materials that use very little water. On the other hand, this beautiful carpet, because it is made of high quality raw materials such as wool, will never have static electricity and is of great artistic value due to its high elegance.

A large number of knots have been used in the weaving of Kerman carpets. Asymmetrical knots are used in the texture of this type of carpet. In fact, this Iranian art is woven in the form of three wefts, in which the first and third wefts use yarn and the second weft uses thin silk. Various designs are used in the weaving of Kerman carpets, among which we can mention the national flower design, various designs of Shah Abbasi, the tree of life, Quranic frames and indexes, various landscapes and designs of faces.

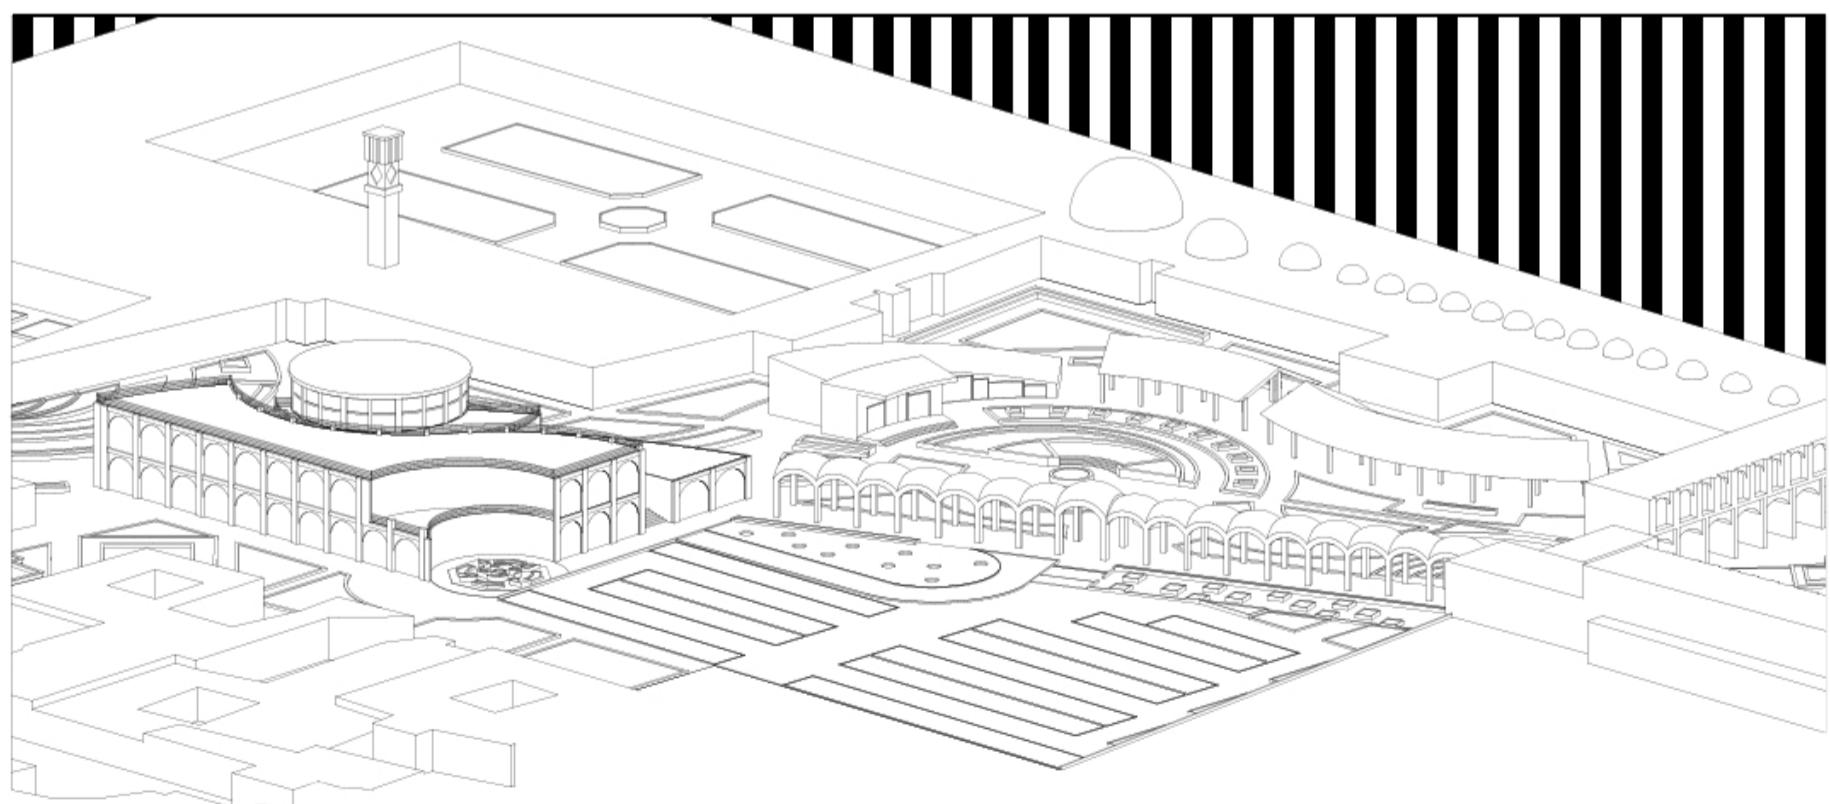

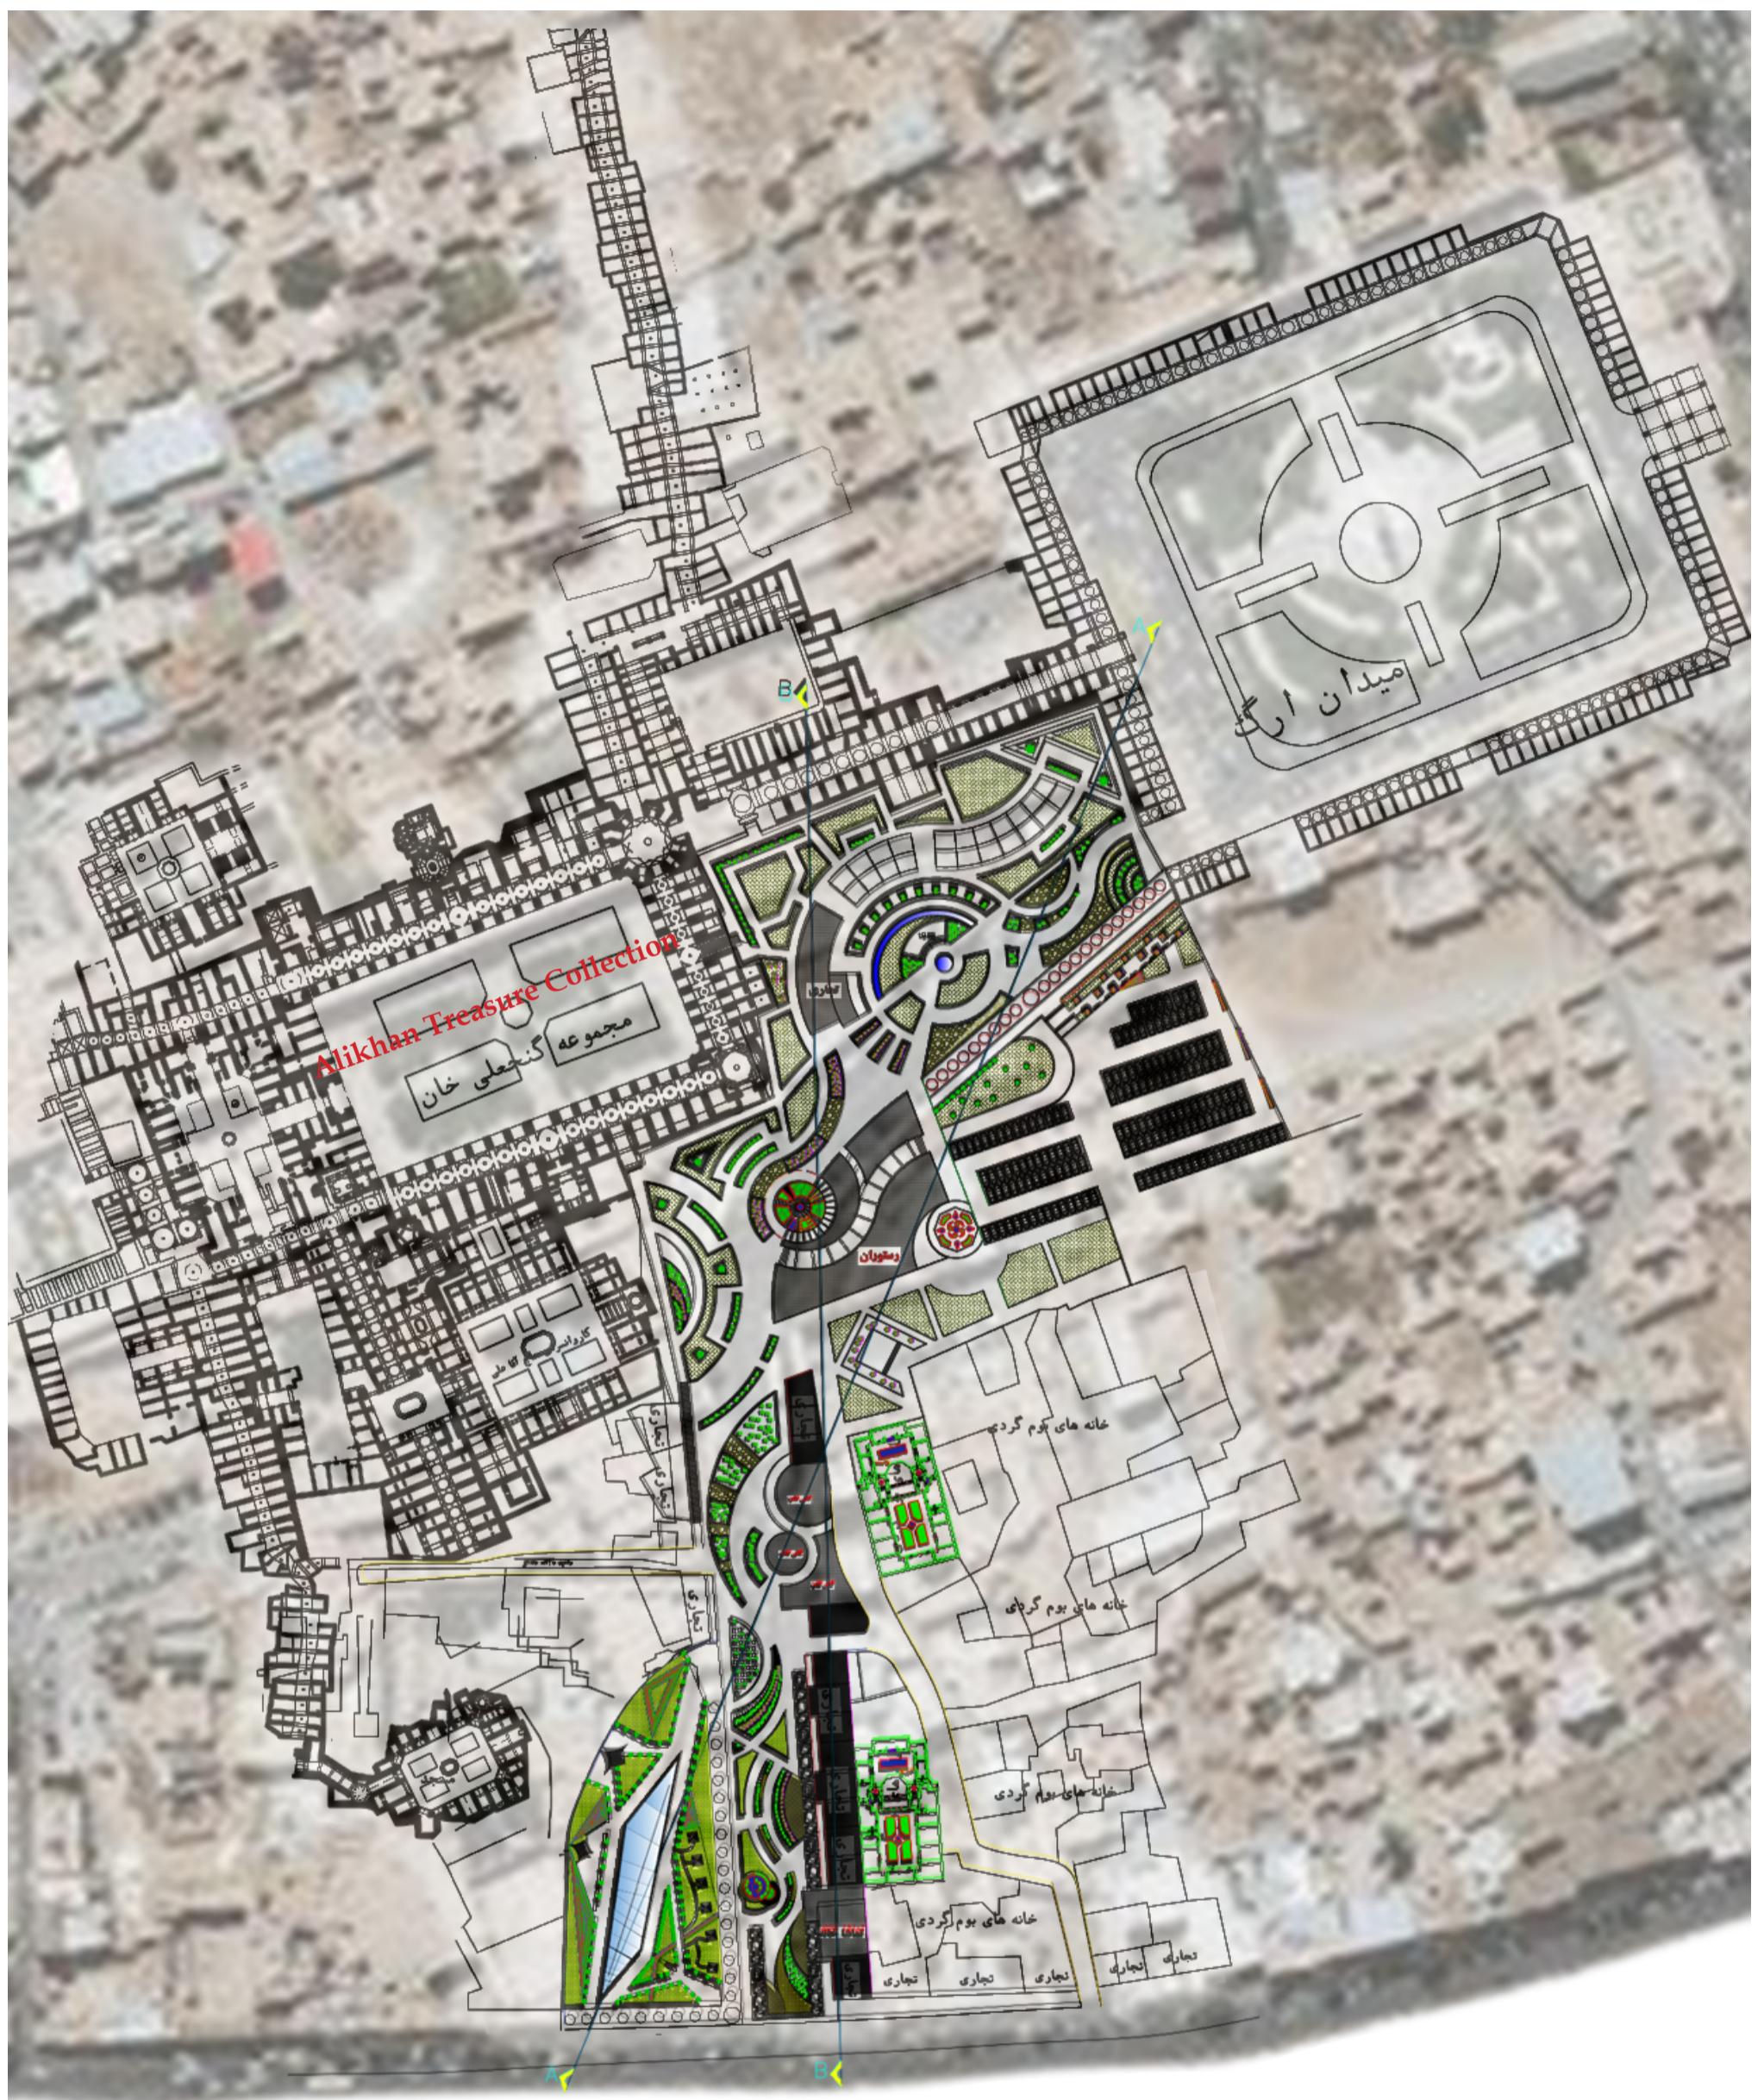

02

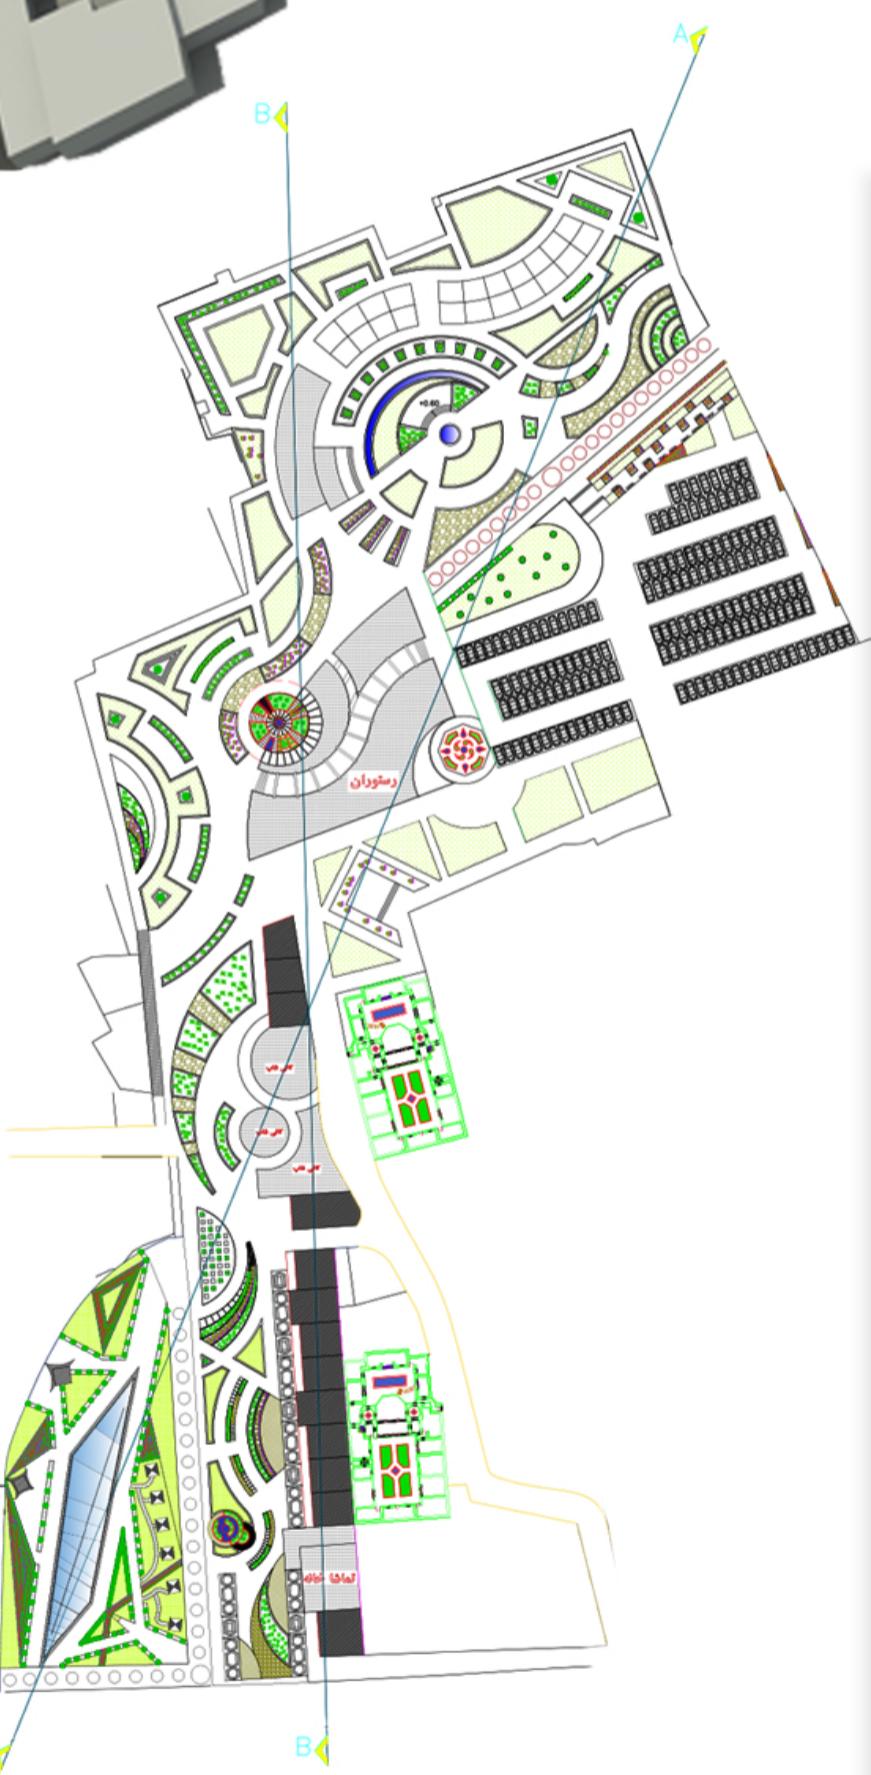

Sidewalk

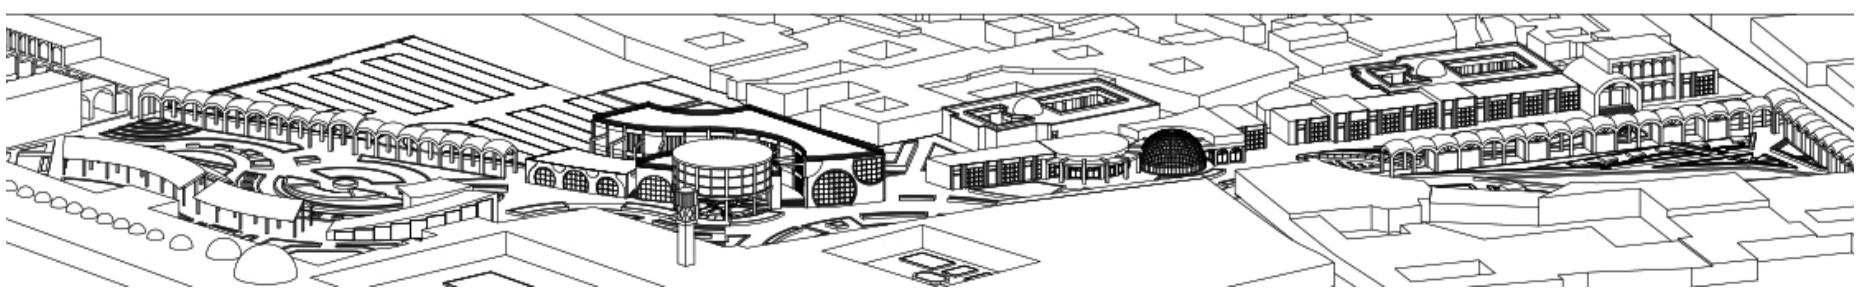

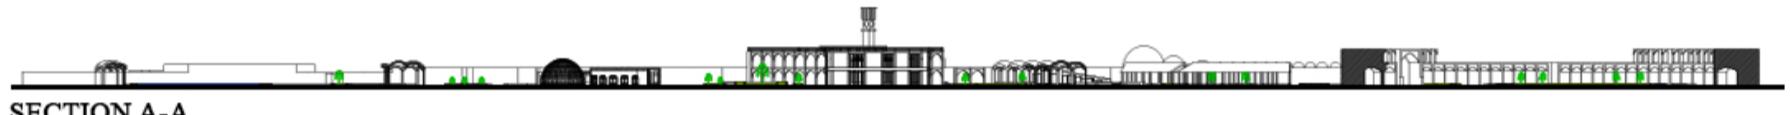

design

The image above is a view of the plan site of Ganj Ali Khan Square located in Kerman (Iran). Brick arches, tiling, green space and water basin are the elements of Ganjali Khan Square. In terms of urban planning principles, this square is one of the squares that can be correctly defined in Iran, and the key elements of the city are located around it with certain proportions and the axis is pedestrian and there is no car traffic at all.

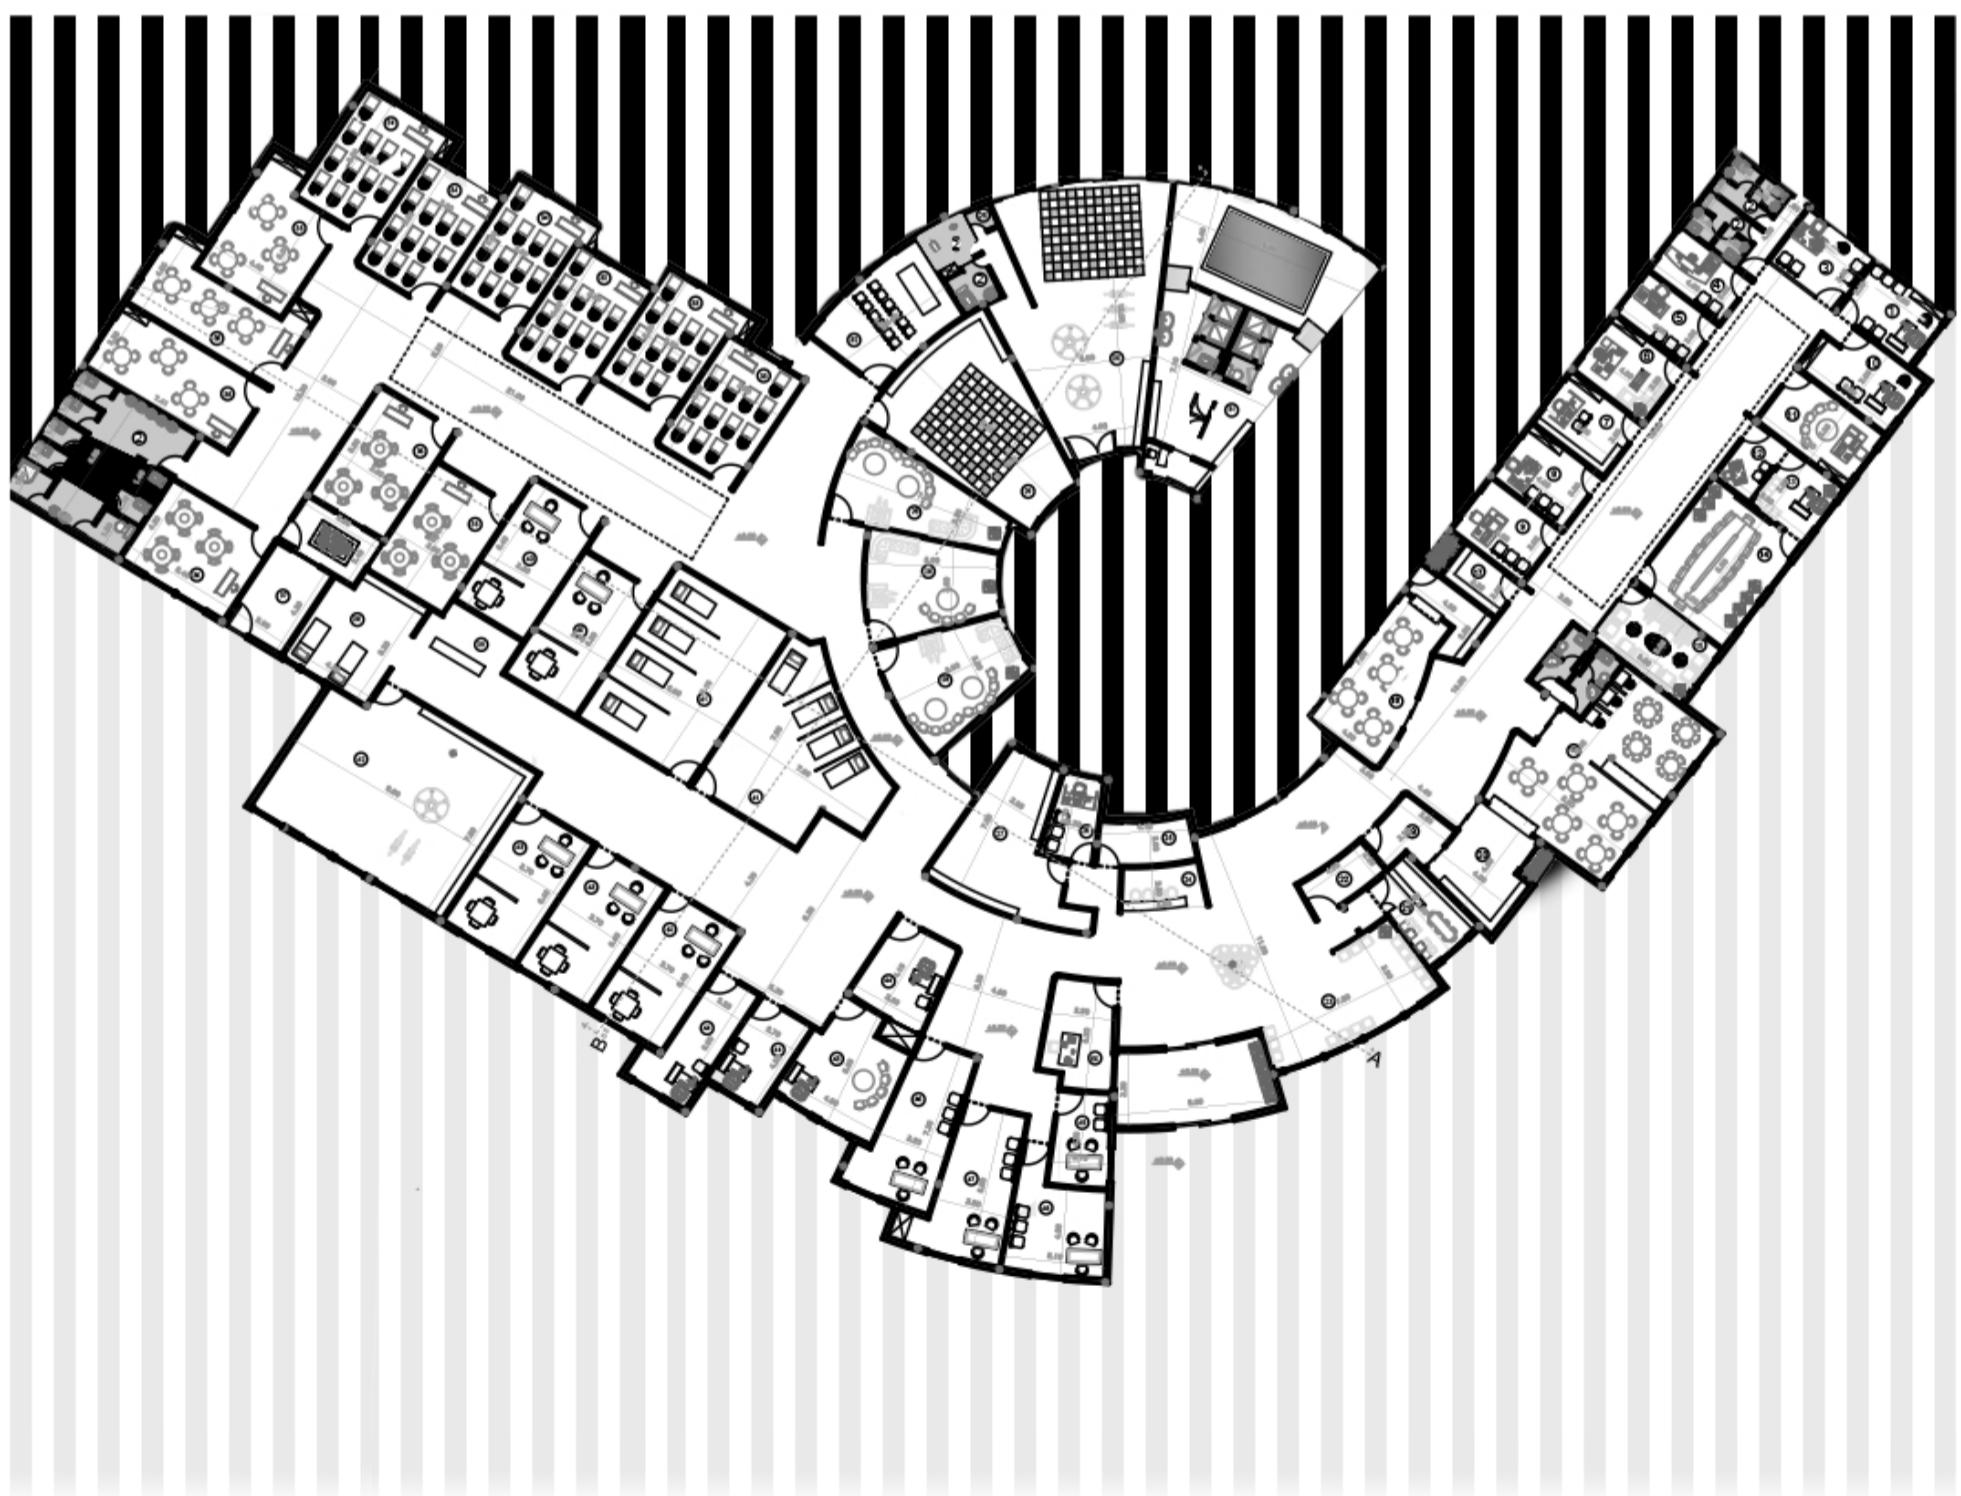

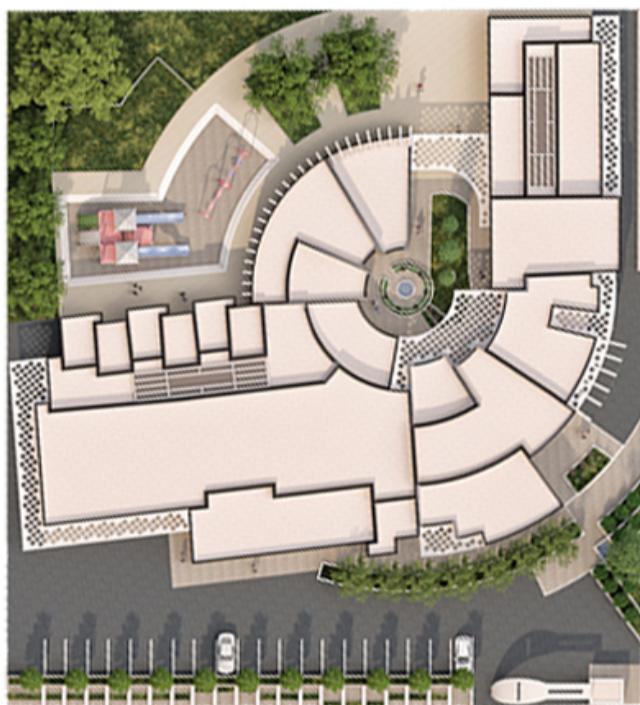

03

Autism

Home

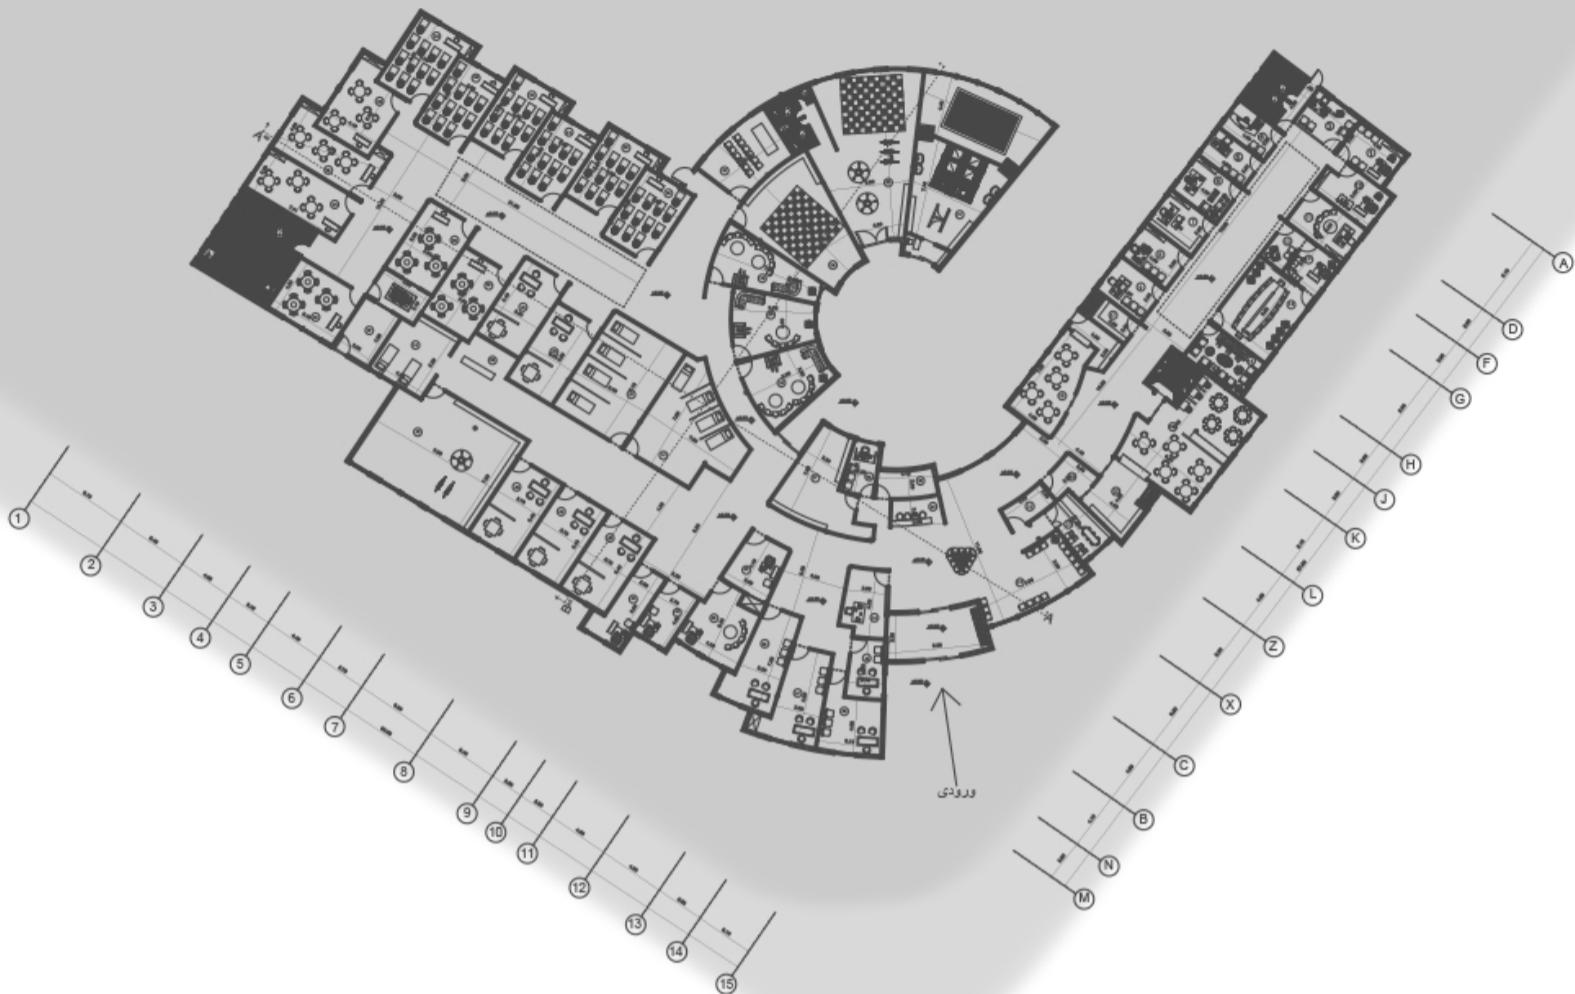

Autism is a developmental disorder characterized by abnormal communication and verbal behaviors. The symptoms of this disorder appear before the age of three and the main cause is still unknown. People with this disorder are called autistic or autist. This disorder is more common in boys than girls.

This design is based on the disorders of children with autism. The plan of this complex is designed in such a way that children do not experience any disorders when entering the complex, and also do not experience behavioral excitement during learning and training in case of disruption and leaving the place. The space used in this complex includes office, education, counseling and treatment.
